

Dinner Hill Wind Farm Project Information Sheet

March 2026

The Project

OX2 is planning the Dinner Hill Wind Farm with approximately 134 turbines across a project area of 31,500 hectares. The site is located within the Hill River and Badgingarra localities approximately 26 km north of Dandaragan and 25km east of Jurien Bay, on private land.

The Project is proposed to connect directly to the 330kV Neerabup to Eneabba transmission line, which traverses the site, via a terminal station proposed to be located within the project area.

Dinner Hill Wind Farm will likely include an ancillary battery energy storage system (BESS) to support the wind farm and discharge clean energy when it is needed most. The size of the BESS will be confirmed once further technical assessments are undertaken.

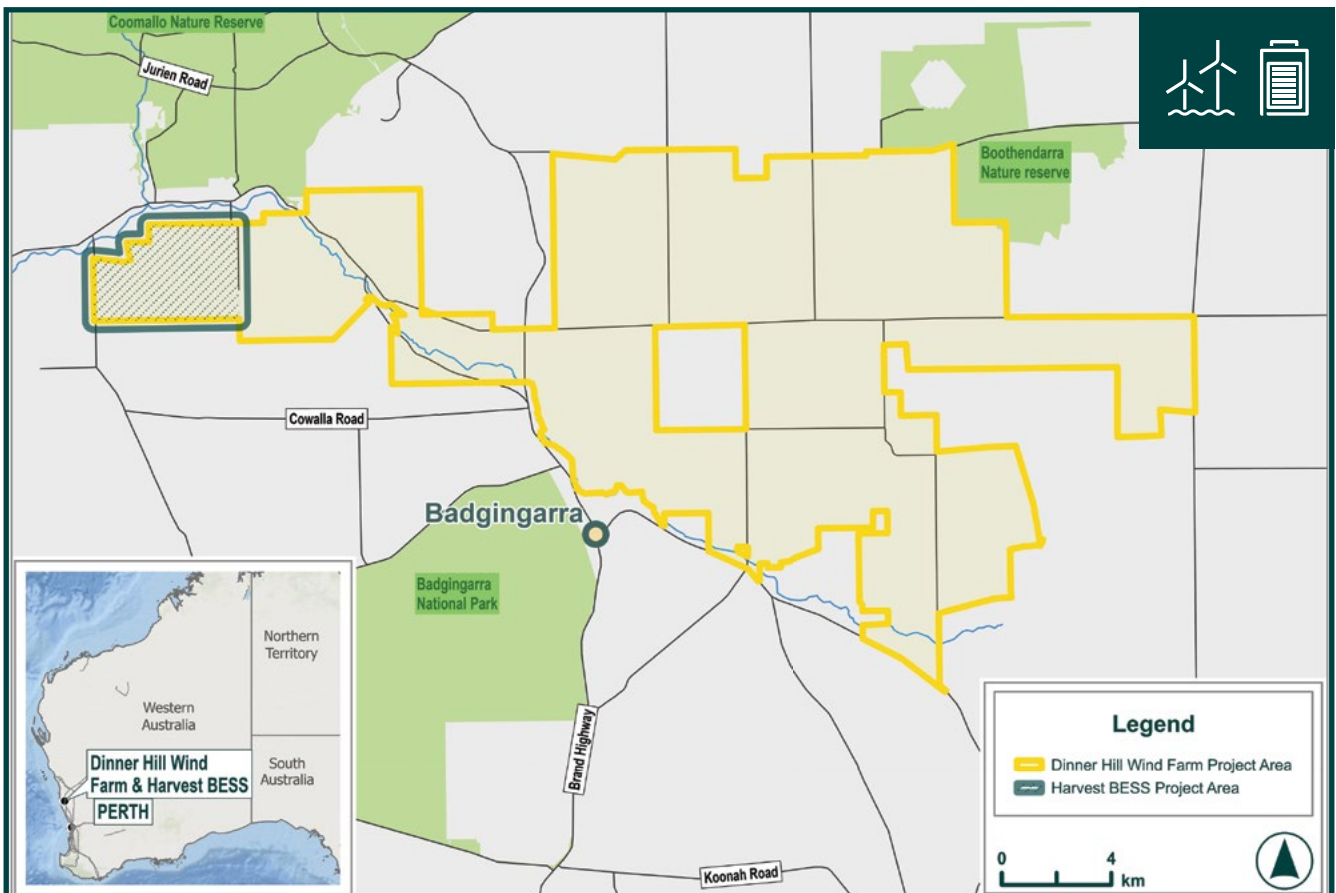

The ancillary BESS is in addition to OX2's proposed Harvest BESS which is being developed separately.

Project Benefits

The Project is expected to deliver affordable, clean and reliable electricity for Western Australia while offering economic, social and environmental benefits, including:

- Powering approximately 500,000 WA homes with clean energy.
- Creating procurement and employment opportunities during construction and operations.
- A community benefit program which will be developed in consultation with the community.
- Reducing, on average, 1.8-2 million tonnes annually of CO₂ emissions.
- Supporting Australia's targets of 82% renewable electricity by 2030 and net zero by 2050.

The Dinner Hill Wind Farm project area is co-located with the project area of OX2's proposed Harvest BESS.

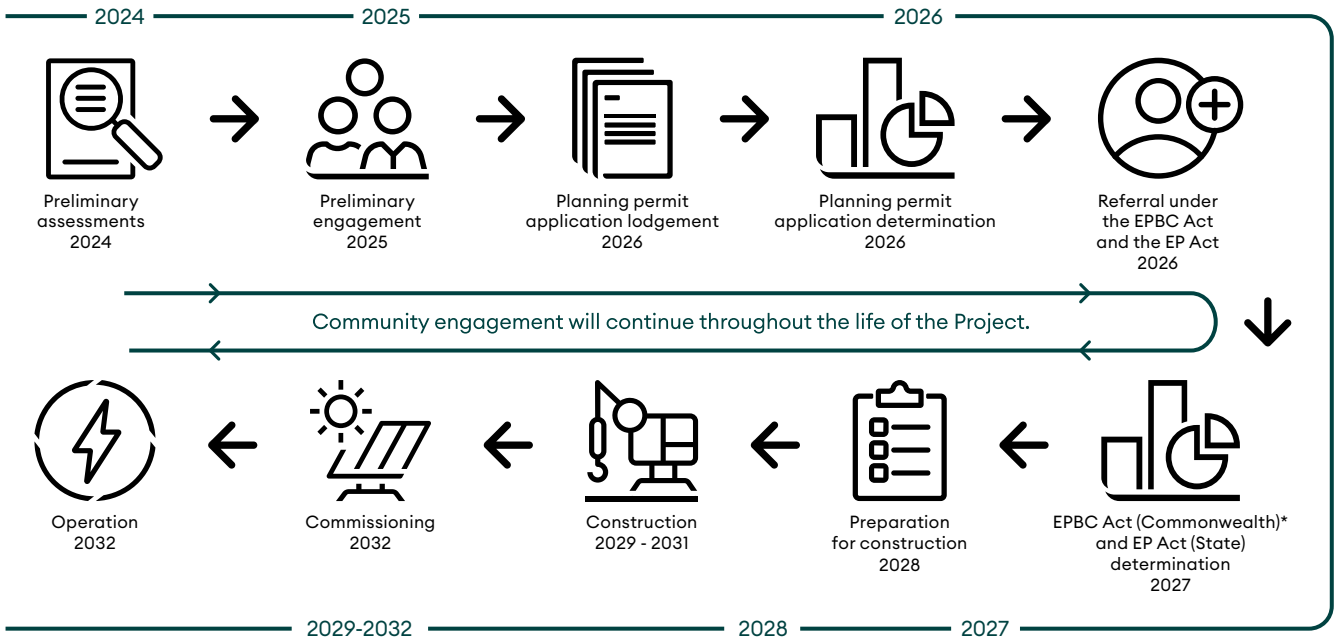

Community Engagement

OX2 is committed to collaborating with the local communities, Council and Traditional Custodians to understand community views and aspirations and to design a community benefit program that drives positive economic and social outcomes while providing lasting value. Community engagement activities began in late 2025 and will continue throughout the Project's life.

Project Status

We are currently in the early stages of the Project’s development. Subject to local, state and Commonwealth planning and environmental approvals and grid connection agreements, construction is expected to commence in 2029 and operations are expected to begin in 2032.

The estimated timeline for the Project’s lifecycle includes the following key phases:

*If approval in accordance with the EPBC Act is required

Planning Approval Process

OX2 will be seeking a planning permit under the *Planning and Development Act 2005* and referring the project in accordance with *Section 38 of the Environmental Protection Act 1986 (WA)* (EP Act).

The Project will also be referred to the Department of Climate Change, Energy, the Environment and Water under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) to understand whether Commonwealth approval is required.

Fast Facts (Approximate estimates based on current Project size)

Local Government Area	Shire of Dandaragan
Location	Localities of Hill River and Badgingarra
Traditional Custodians	Yued People
Project Area	30,100 hectares/ 74,300 acres, less than 5% used for infrastructure, remaining land used for agriculture
Number of Turbines	132
Turbine Tip Height	270m
Wind Farm Capacity	990 MW
Homes Supplied	500,000
CO ₂ Saved	1.8-2 million tonnes annually
Jobs Created During Construction	550 peak (direct and indirect employment)
Jobs Created During Operation	30

The information provided in this fact sheet was accurate at the time of publication; however, some details may change as the project progresses.
